

ABSTRACT OF THE DISCLOSURE

A wires-easy-arranged and low-cross-talk patch panel of the present invention mainly includes a panel with rotating holes which locate on each side of the panel; an electric circuit board mounted on the panel,
5 which is structured a plurality of jacks and a plurality of IDC sets (Insulation Displaced Contact) ; a plurality of jacks separated into at least one set, which parallelly locate on the electric circuit board; a
10 plurality of IDC sets separated into upper and lower sets, which parallelly locate on the electric circuit board and electrically connect with a plurality of jacks; a plurality of cable split rings with flexible holders plugged into the rotating holes; and a cover with a
15 plurality of openings ,which covers the electric circuit board and exposes the jacks and the IDC sets.
